Dalau wins prestigious medical device manufacturing contract

Dalau – specialists in P.T.F.E. and plastic component manufacturing – have won the contract to manufacture one of the main component elements within the ‘ground breaking’ **Intraject** – a needle-free delivery system for self-administered drugs.

Actively involved in the design prototyping and development of the piston component. Dalau were originally chosen for their experience in bespoke component design and manufacturing capabilities under ‘cleanroom’ conditions.

David Sage, Dalau, commented, “that the nature and use of the end component product, only measuring 11mm in length, not only required a high surface finish to ensure ease of piston movement within the Intraject system, but also required the lip seal’s form

material, through to its extrusion and eventual component production, that a complete control of the piston’s quality could be guaranteed well above the exacting component tolerances set by Ardigim and all in a clean environment.”

Chris Keenan, Ardigim, confirmed, “that through only using ‘best-in-class’ manufacturers like Dalau has meant they consistently achieve their bench mark for innovative product solutions in the area of drug device development.”

Editor’s notes:

Founded as a family business in 1955, Dalau, has grown to become the largest polytetrafluoroethylene (PTFE) processor in the United Kingdom and now has subsidiaries in New Hampshire, USA and in Düsseldorf, Germany, exporting to 35 countries around the world.

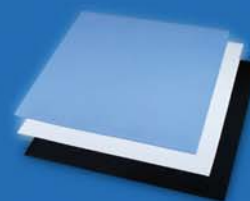

Dalau specialises in producing high quality extruded rod, moulded rod and tube, skived films and sheets, and machined components, manufactured using only the finest quality virgin PTFE, and is one of the few companies who operate a fully computerised quality management system.

Dalau’s high quality products have been specified for some of the world’s most prestigious projects being extensively used across a diverse range of industrial sectors.

and shape to deal with potential temperature fluctuations that may be encountered during its use, ensuring that the seal would prevent any drug leakage – enabling the prescribed drug dosage to be correctly delivered consistently time after time – no matter the temperature conditions.

Operating within our total quality management regime, has meant that from the initial raw
